

# Automation Test Engineer Capstone

## API testing using Postman.

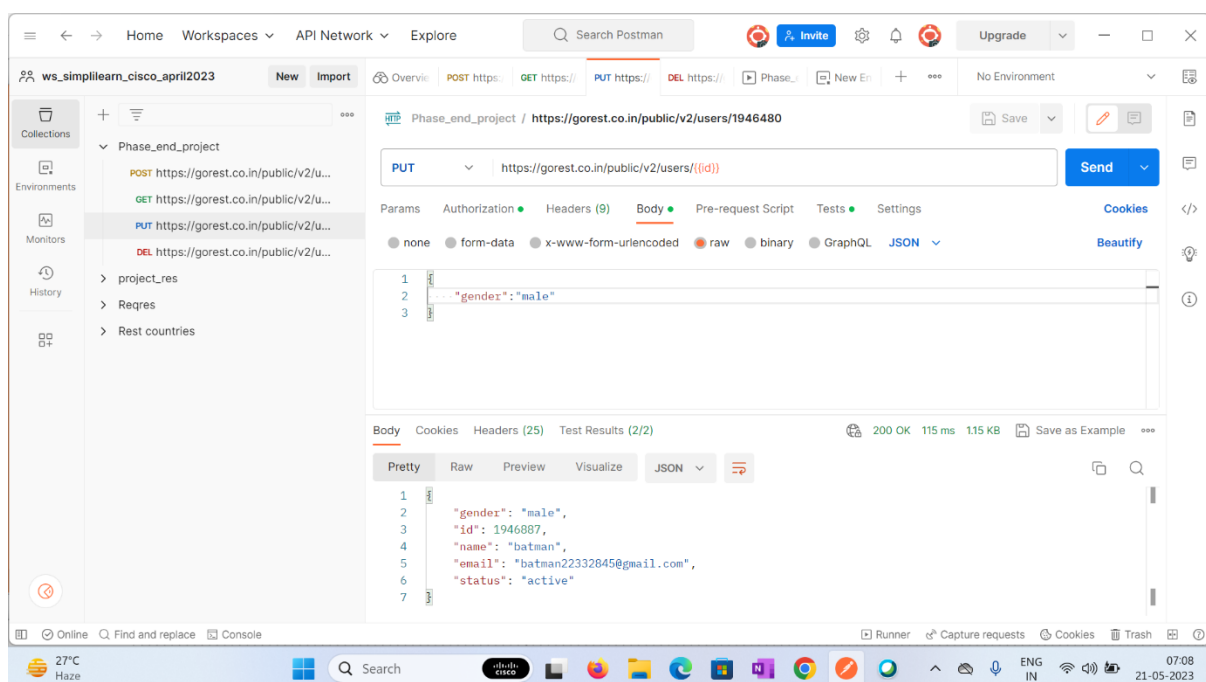

### 1. Sending a POST request to create a user, using Bearer Token.

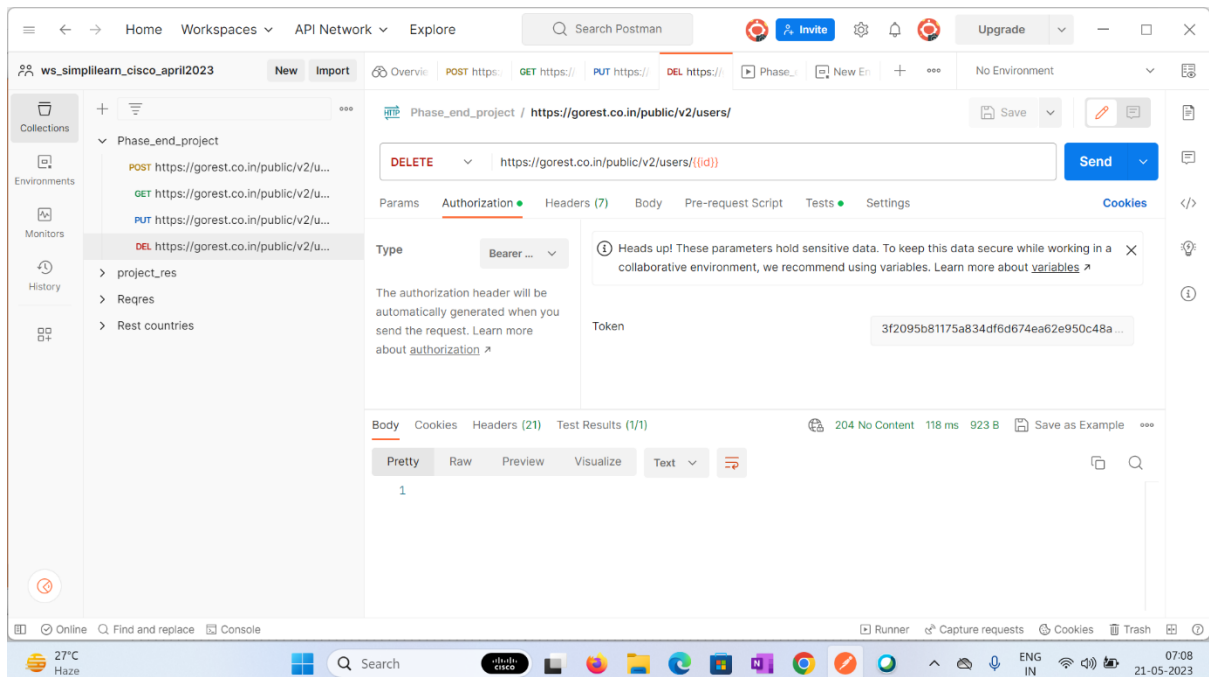

## 2. Sending a GET request to verify the user has been created, using Bearer Token.

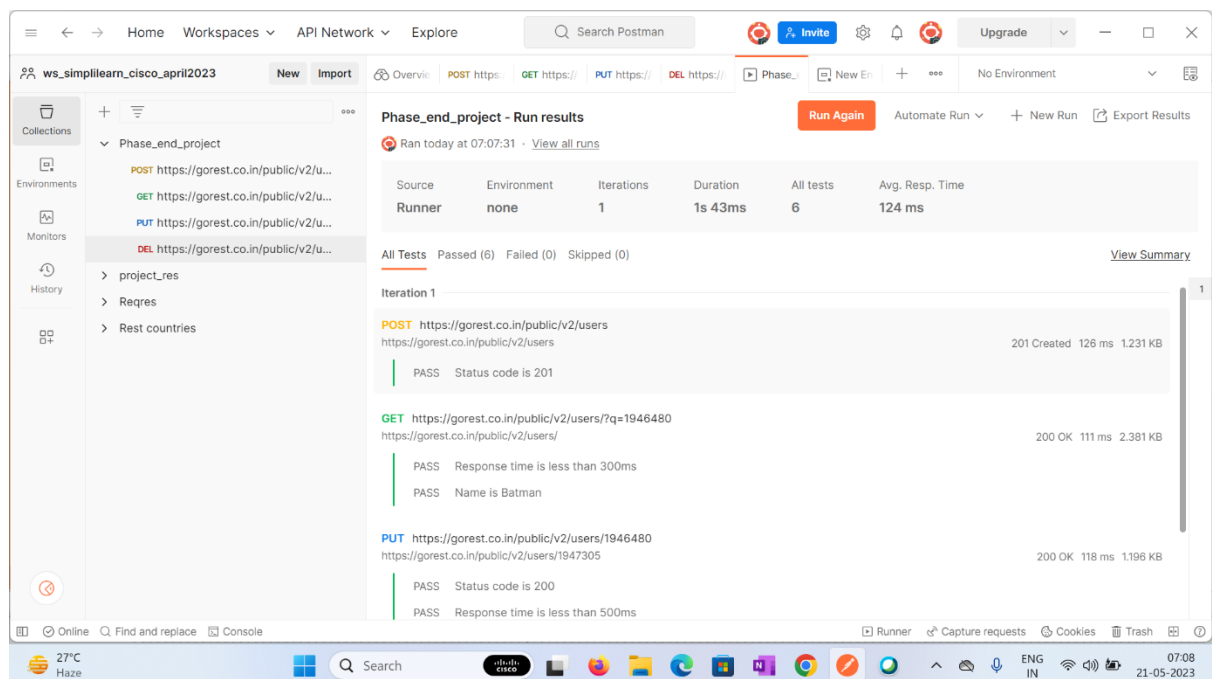

## 3. Updating the same user using PUT request, using Bearer Token.

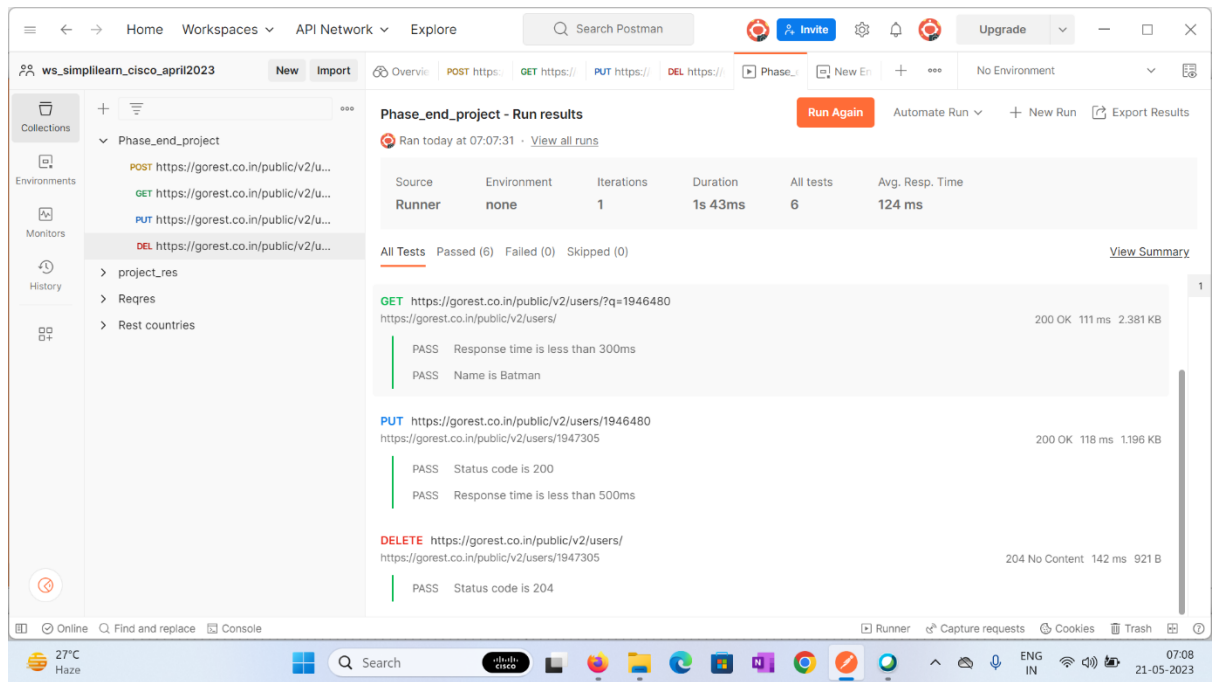

#### 4. Deleting the above user using Delete request.

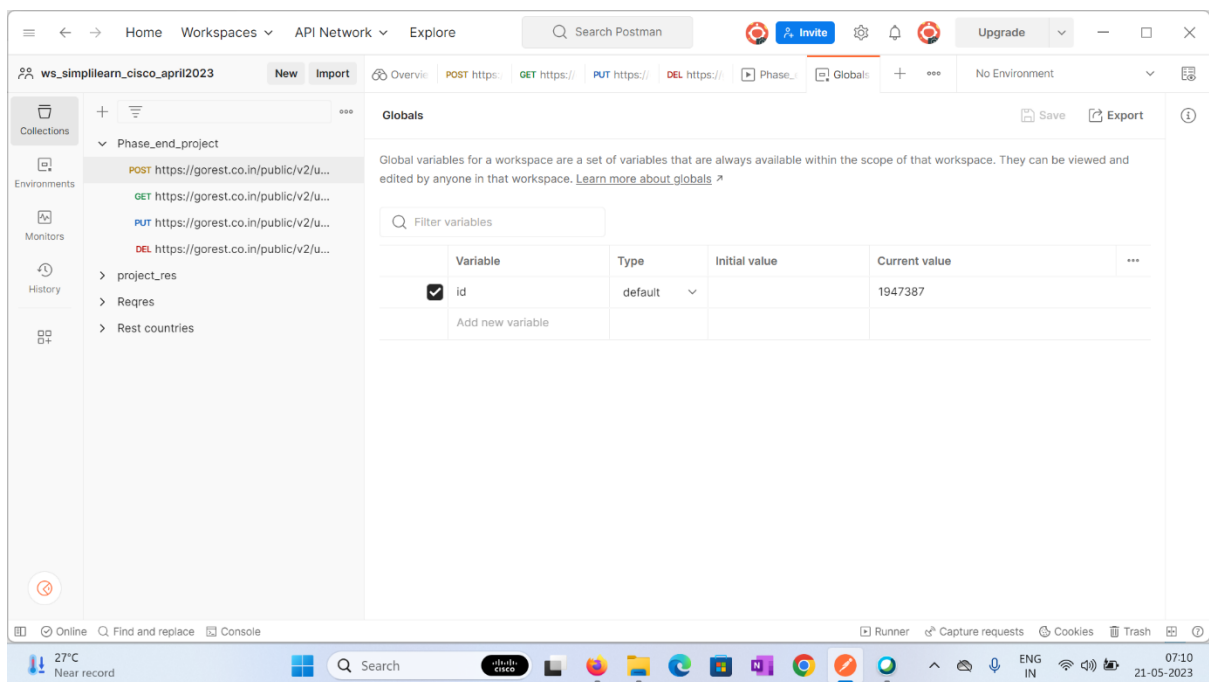

#### 5. Verifying the post, get, update and delete request of the above user using Bearer Token.

## 6. Using an environment variable for verifying the user

## 7. Monitoring the API Testing to check the status whether it is healthy.
